

Helvetia Alpine Sensor Network Overview

Fictional document created for the Local RAG PDF sample.

Purpose

The network monitors air temperature and relative humidity at fictional alpine field stations.

Operating Facts

Fact	Configured value
Upload interval	Every 15 minutes
Offline gateway buffer	72 hours of sensor readings
Transport	MQTT over TLS 1.3
Gateway retention after upload	30 days
Low battery alert	Below 20 percent

Outage Behaviour

During a network outage, each gateway buffers readings locally for up to 72 hours. When connectivity returns, the gateway uploads the oldest buffered reading first.

Scope Boundary

This sample does not describe a real installation and must not be used for safety, compliance, or engineering approval.
